

LA RECHERCHE SUR L'OBÉSITÉ, LA PLACE DES INSTITUTS

CHRISTIAN BOITARD
Professeur d'immunologie clinique,
Directeur de l'institut « circulation, métabolisme, nutrition »

CIRCULATION METABOLISM & NUTRITION

recommandations AERES

- ☞ streamline and unify the management system of its life sciences and health research operations
- ☞ a single National Institute for Life and Health Sciences Research
- ☞ career pathways of the French life sciences and health scientists
- ☞ implementation strategy that would ensure continuity over a transition period of several years
 - ☞ Streamline the peer review and evaluation process
 - ☞ Unify and simplify the approach to the management of intellectual property
 - ☞ In-depth review of INSERM budget allocations
 - ☞ Improve relationships with all research stakeholders, particularly the public
 - ☞ Maximise the use and coordination of funds for clinical research
 - ☞ Reduce the number and size of advisory committees

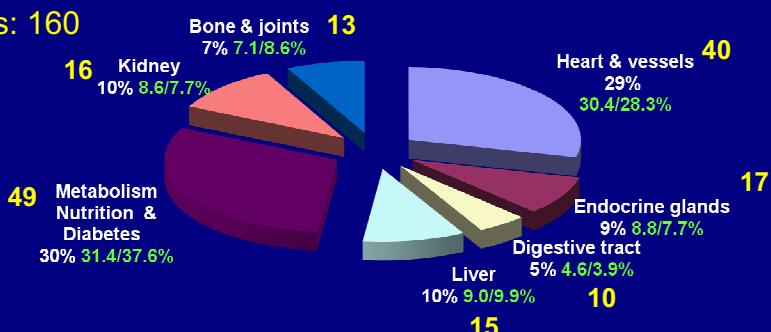

CIRCULATION METABOLISM & NUTRITION

Institut thématiques
Inserm
Institut national
de la santé et de la recherche médicale

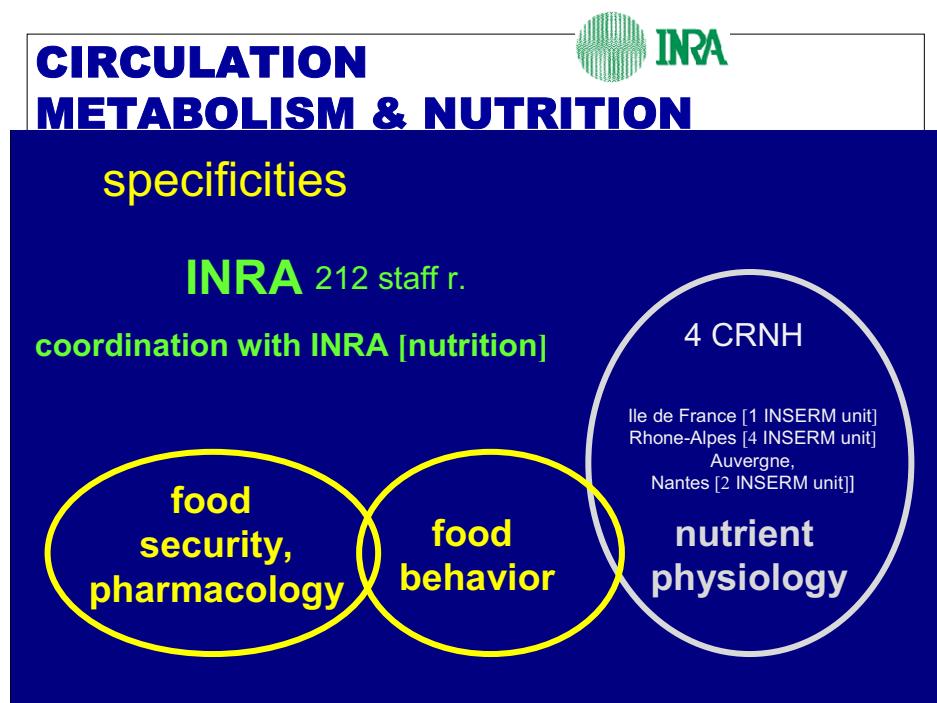

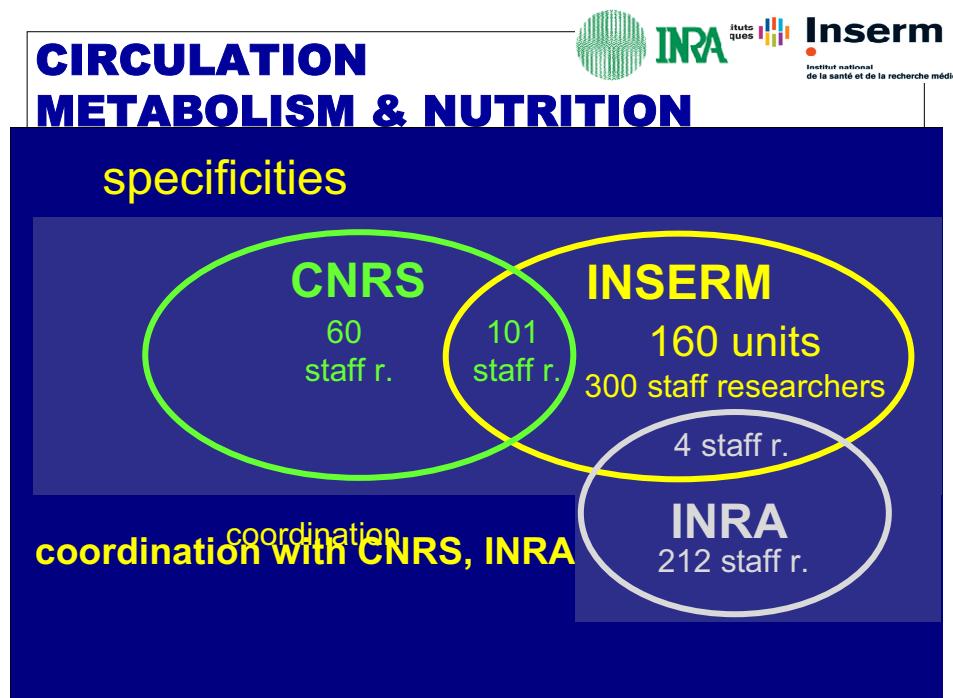

staff researchers:

405 [INSERM:300 CNRS:101 INRA: 4] + university 628/251.6

units: 160

directors: 60% on a university track

CIRCULATION METABOLISM & NUTRITION

publications 2004-2008 (IF > 5)

circulation
diabetes
nutrition
obesity,
endocrinology
gastro-enterology
hepatology
nephrology
bone & joints

domain	INSERM	total
heart/vessels	349	811
diabetes/endoc	496	911
lipids, obesity	55	130
liver/gut	385	734
bone/joints	109	250
kidney	150	283

CIRCULATION METABOLISM & NUTRITION

major issues in the french health context

health issues

☞ obesity: 12.4% of the adult population in 2006

☞ public health challenge in two opposite fields: diseases related to nutrition overload: obesity, dyslipidemia, type 2 diabetes

☞ cardiovascular diseases: 29% of deaths [atherosclerosis]

☞ diabetes: 6.2%, glucose intolerance: 5.6% in France (age 20-70)
leading cause end stage renal disease, blindness, coronary disease
10% health care expenses in USA 2002/↗ 50% 1997 → 2007

☞ malnutrition: 30-50% hospitalized patients, independant mortality factor

CIRCULATION METABOLISM & NUTRITION

spécificité du champ de l'obésité

- ☞ large éventail de champs disciplinaires:
de la connaissance de l'aliment (chimie, physicochimie, technologie des procédés) à celle de l'alimentation et de ses effets (biologie et toutes ses facettes, épidémiologie, psychologie, sociologie, économie)
- ☞ de l'homme sain à l'homme malade
connaissance de l'aliment, physiologie du tube digestif, comportement alimentaire, sécurité alimentaire
- ☞ 4 départements : alimentation humaine (AlimH), technologie alimentaire (CEPIA), microbiologie (MICA) et sociologie/économie (SAE2).
caractéristiques organoleptiques des aliments et comportements alimentaires, « métabolonomique » des effets physiologiques des aliments et des nutriments, microflore digestive, aliment et gènes : nutrigénétique, nutrigénomique, épigénétique

CIRCULATION METABOLISM & NUTRITION

major issues in the french health context scientific issues

- ☞ genetics: human genome sequence
 - ☞ the gene to function challenge
 - ☞ the human diversity challenge
 - ☞ epigenetics, metagenomics
- ☞ development biology: stem cell differentiation
 - ☞ organ replacement therapy
- ☞ innate immunity and metabolic pathways
 - ☞ environment, inflammation, diseases
- ☞ innovative therapies
 - ☞ strategies based on disease mechanisms
